### ***Award Winning BackupEDGE Now Available Through JBSi***

**Aliquippa, PA - March 1, 2001**

Microlite Corporation is pleased to announce that its popular *BackupEDGE* backup and disaster recovery software for Unix and Linux is now available through national value added distributor **JBSi**.

*"We're thrilled to have JBSi as a business partner", said Tom Podnar, President of Microlite. "Our business model is to add value to Unix and Linux systems exclusively through the channel, and JBSi has a proven record of supporting and supplying the resellers and end users who need our products the most."*

#### **About BackupEDGE**

*BackupEDGE* is enhanced backup and disaster recovery software for Unix and Linux systems. It provides many features and benefits not available in other products in its class, including low level tape device and autochanger support, high speed retrieval of stored files, and support for advanced industry initiatives such as TapeAlert™ diagnostics. Storage devices may be attached to the local system or to any Unix or Linux system on the network.

It also comes with *RecoverEDGE*, enhanced disaster recovery support for OpenServer, UnixWare 7 and Linux systems. *RecoverEDGE* can perform bare-metal recovery of crashed systems without the necessity of re-installing the operating system before restoring data files. In addition to traditional boot floppies, *RecoverEDGE* also supports the creation of CD-Recordable boot media and OBDR™ bootable nightly backup tapes. All boot media have network and modem based remote access capabilities and are capable of restoring systems from remotely attached storage devices.

In a recent test of five popular backup applications under Linux, *BackupEDGE* won handily and was awarded the "**Top Of The Word**" designation by SCO World Magazine (now Linux Server Computing). This is the third time in recent years *BackupEDGE* has been tested, and its third victory. Reprints are available on request.

#### **About JBSi**

**JBSi** (Jones Business Systems, Incorporated) is a national solutions integrator, white box system builder and service provider. **JBSi** manufactures the Terian product line of built-to-order computing solutions for its reseller and enterprise partners. Terian systems combine the latest Intel hardware technology with built-to-order flexibility and reliability. **JBSi** is actively recruiting new resellers for Terian Systems.
